## Assembler Code Specialist Looking at a Higher-Level Languages Programmer

The assembler code specialist might admire the ease and speed with which the higher-level languages programmer can write code. They might be impressed by the abstraction and simplicity of higher-level languages, which allow the programmer to focus on the logic and structure of the program rather than the details of the computer's operation.

At the same time, the assembler code specialist might feel that the higher-level languages programmer is missing out on a deeper understanding of how the computer works. They might believe that programming in assembler gives them more control and flexibility, and they might see the reliance on compilers and other tools as a potential weakness.

Image Bing: a programmer in front of open microcontrollers typing concentrated into the device

# Introduction

Where are we coming from...

```
void variable_sort_2(int length, int *a)
{
    // Determine the number of elements
    switch (length)
    {
        case 0:
        case 1:
            // Exit if less than 2 elements
            return;
        case 2:
            // Below routine sorts 2 elements
            int tmp = a[0];
            a[0] = (a[1] < a[0]) ? a[1] : a[0];
            a[1] = (a[1] < tmp) ? tmp : a[1];
            return;
    }
}
```

## Higher-Level Languages Programmer Looking at an Assembler Code Specialist

The higher-level languages programmer might be in awe of the assembler code specialist's deep understanding of the computer's operation. They might admire the specialist's ability to write efficient and optimized code that takes full advantage of the computer's capabilities.

However, the higher-level languages programmer might also see the assembler code specialist's work as tedious and unnecessarily complex. They might feel that higher-level languages are a more practical and efficient choice for most programming tasks, and they might see the specialist's focus on assembler as somewhat outdated or niche.

# ChatGPT TIA-Portal

- Shown at Hannover Fair 2023
- TIA-Portal / Openness
- Documentation is surprisingly good

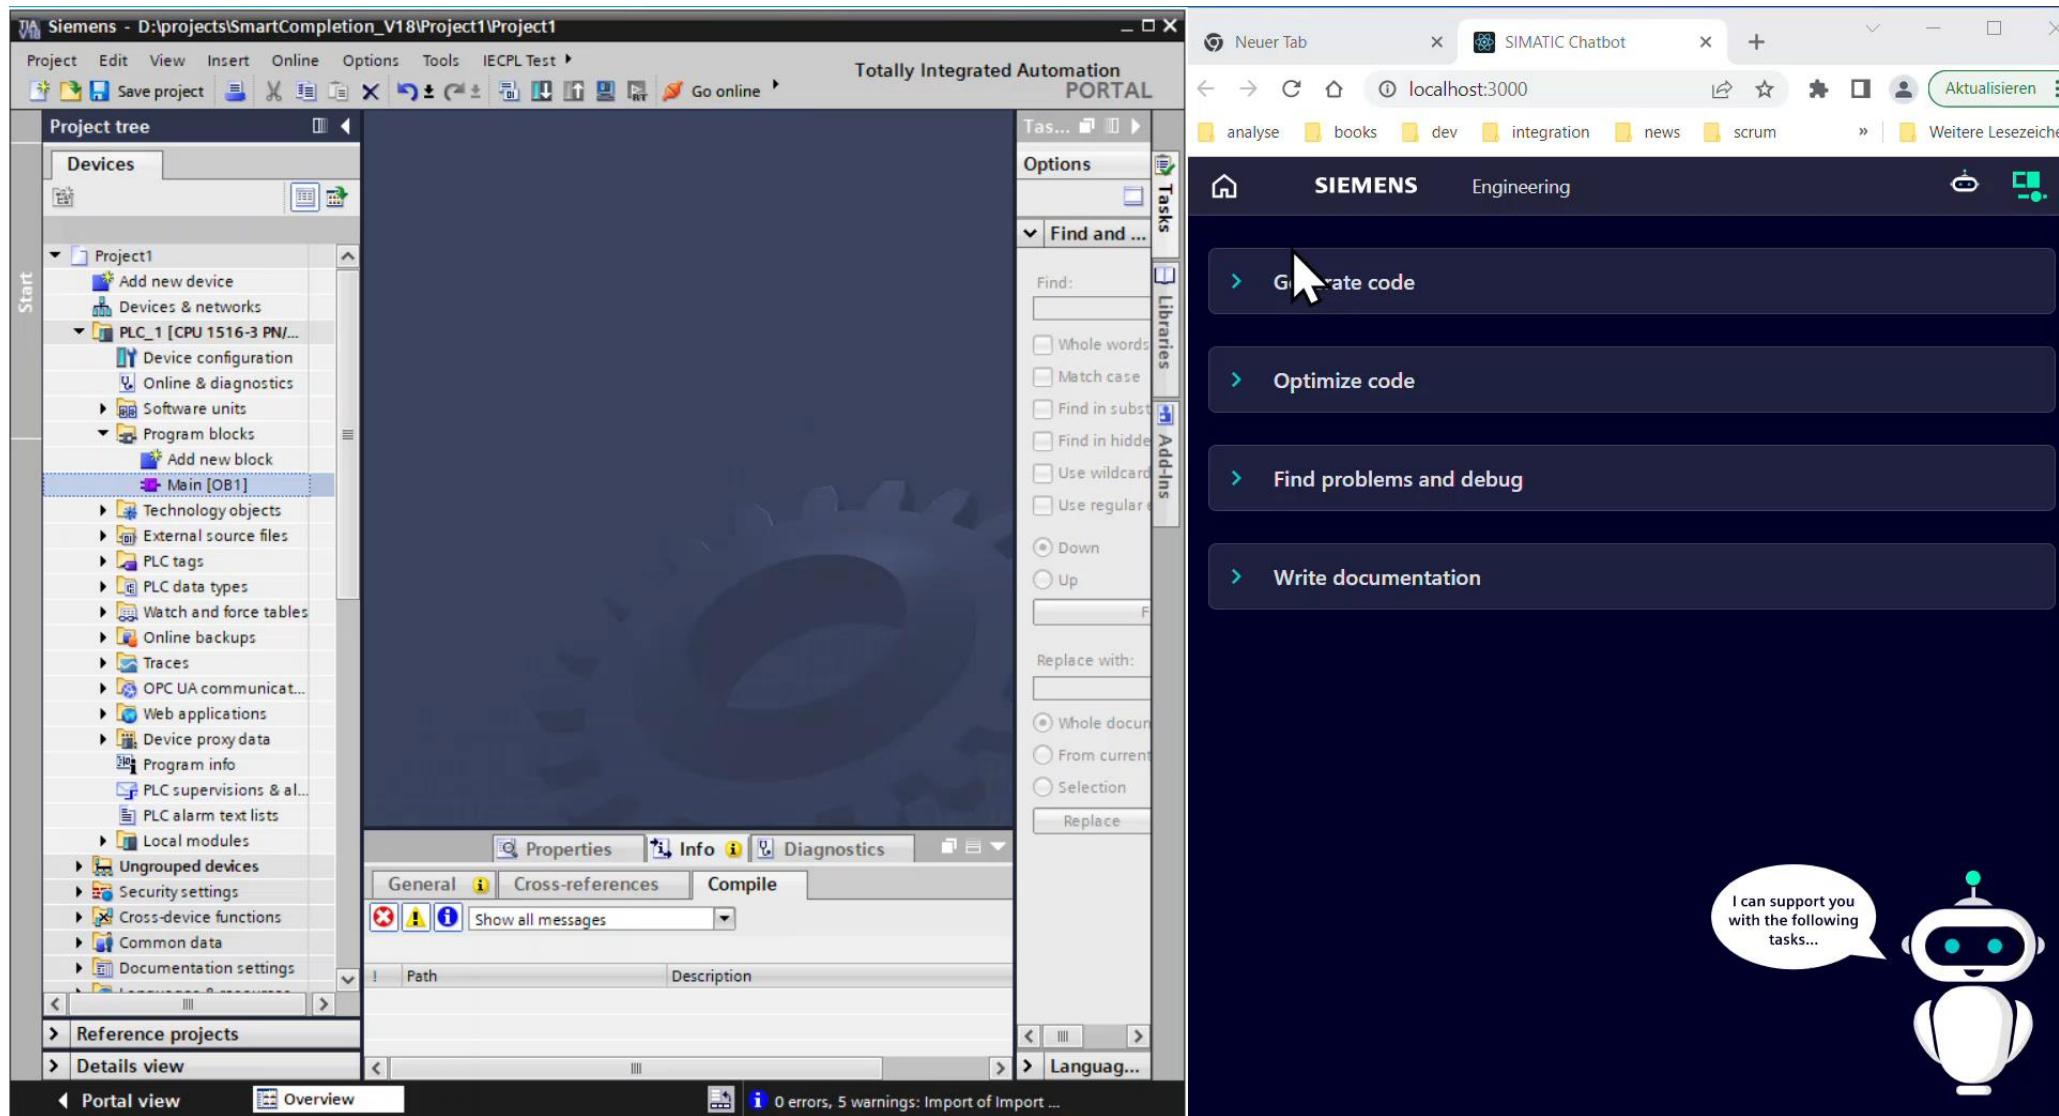

The screenshot shows the Siemens Engineering interface. At the top, it says "SIEMENS Engineering". In the center, there is a "Generate code" section with a text input field containing the text: "I have two points with respective coordinates (3,5) and (6,9). I want to compute the distance bet...". Below this is a code editor window displaying the following VBA-like code:

```
FUNCTION "Calculate_Vector" : REAL
VAR_INPUT
    //Declare input variables
END_VAR
VAR_OUTPUT
    magnitude : REAL; //Declare output variable
END_VAR
VAR_TEMP
    x1 : REAL := 3; //Declare x coordinate of point 1
    y1 : REAL := 5; //Declare y coordinate of point 1
    x2 : REAL := 6; //Declare x coordinate of point 2
    y2 : REAL := 9; //Declare y coordinate of point 2
END_VAR
//Calculate distance between two points using Pythagorean theorem
magnitude := SQRT((x2-x1)*(x2-x1) + (y2-y1)*(y2-y1));
//Return magnitude as output
calculate_Vector := magnitude;
END_FUNCTION
```

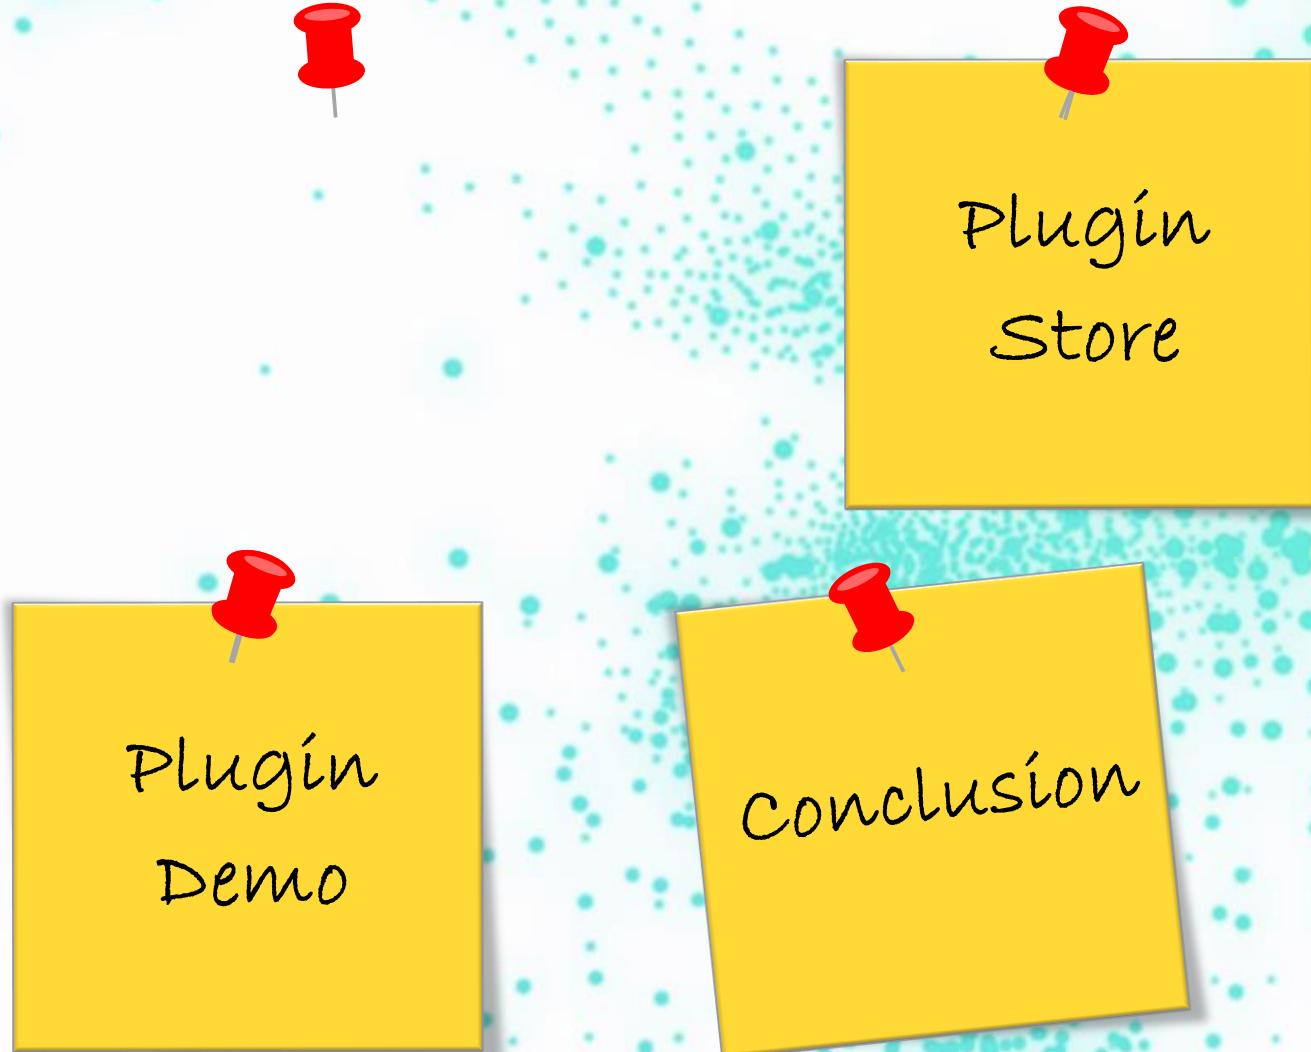

At the bottom right of the code editor is a blue "Insert" button.

## Code-Interpreter like

Open [https://app.noteable.io/f/7cd9dd62-8381-490e-aba1-fbd83cf3755/electric\\_vehicles.ipynb](https://app.noteable.io/f/7cd9dd62-8381-490e-aba1-fbd83cf3755/electric_vehicles.ipynb) in noteable and make a statistical analysis and explore the data. The dataset is called Electric\_Vehicle\_Population\_Data.csv

The data has been successfully loaded into a dataframe. Here are the first few rows:

Next, let's perform some exploratory data analysis. We'll start by checking the data types of each column, looking for missing values, and getting some basic statistics.

Next, let's explore the data further by looking at the distribution of electric vehicle types, the most common makes and models, and the distribution of model years.

Next, we can perform more specific analyses based on the questions or hypotheses we want to test. For example, we can analyze the relationship between the electric range and the base MSRP, or we can compare the popularity of different electric vehicle models in different cities or counties. Please let me know what specific analyses you are interested in.

Please compare the popularity of different electric vehicle models in different cities or counties and visualize this in a map

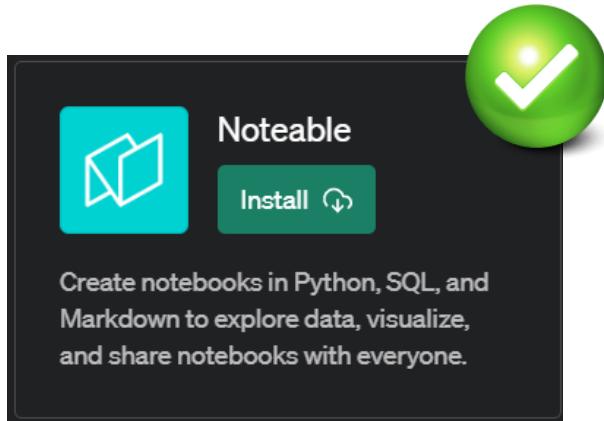

Next, let's create a GeoDataFrame from the DataFrame and plot the data on a map. However, please note that the plotting of data on a map might not provide a clear comparison of the popularity of different electric vehicle models in different cities or counties due to the high density of points. We might need to aggregate the data at the city or county level for a clearer comparison.

Let's try to get the top 5 most popular electric vehicle models in each city.

vom  
01.05.bis 07.06.23  
?

# ChatGPT plugin demo

## Ingredients

### Ingredients:

- a REST API
- a manifest file that describes the plugin
- a YAML file describing the API
- a program entry

Instruct ChatGPT in **YAML** on how to use your plugin

- Define paths
- Summary field
- Description field

```
openapi: 3.0.1
info:
  title: Bundestags Protokolle
  description: Recherchiere aktuelle Aktivitaeten im Bundestag
  version: "v1"
servers:
  - url: PLUGIN_HOSTNAME
paths:
  > /members: ...
  > /activities: ...

  /protocols:
    get:
      operationId: getProtocols
      summary: Listet alle Protokolle die zwischen zwei Stichtagen gefuehrt wurden.
      parameters:
        - in: query
          name: start_date
          schema:
            type: string
            description: Filtert alle Protokolle von einem bestimmten Startdatum an.
        - in: query
          name: end_date
          schema:
            type: string
            description: Filtert alle Protokolle bis zu einem angegebenem Stichtag.
      responses:
        "200":
          description: OK
```

# ChatGPT plugin demo

## main.py

Responsibilities:

- Path to the logo
- Path to manifest file
- Path to YAML file
- Your methods / functions

```
@app.get("/logo.png")
> async def plugin_logo(): ...

@app.get("./well-known/ai-plugin.json")
> async def plugin_manifest(): ...

@app.get("/openapi.yaml")
> async def openapi_spec(): ...

def main():
    app.run(debug=True, host="0.0.0.0", port=5001)

if __name__ == "__main__":
    main()
```

# ChatGPT plugin demo

## main.py domain logic

Your domain logic:

- Define the Host-URL
- Adapt the variable input
- Send the request
- Get the response
- Do the extraction, if needed

```
# Note: setting CORS to allow chat.openapi.com is only required when running a localhost plugin
app = quart_cors.cors(quart.Quart(__name__), allow_origin="https://chat.openapi.com")
HOST_URL = "https://search.dip.bundestag.de"

1 @app.get("/members")
> async def get_members(): ...

@app.get("/activities")
> async def get_activities(): ...

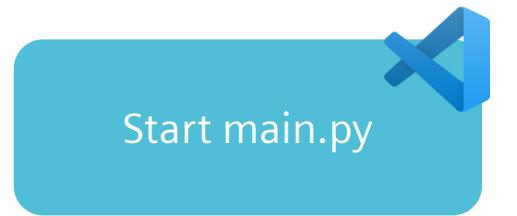

@app.get("/protocols")
async def get_protocols():
    start_date = request.args.get("start_date")
    end_date = request.args.get("end_date")
    res = requests.get(
        f"{HOST_URL}/api/v1/plenarprotokoll?f.datum.start={start_date}&f.datum.end={end_date}&f.zuordnung=B1"
    )
    2 # Filter the response
    if res.status_code == 200:
        data = res.json()
        # Extract only results where entries of "Plenarprotokoll" are listed
        plenarprotokolle = [item for item in data['documents'] if item['dokumentart'] == 'Plenarprotokoll']
        #for protokoll in plenarprotokolle:
        #    print(protokoll)
        return quart.Response(response=json.dumps(plenarprotokolle), status=200)

    else:
        print(f'Error: {res.status_code}')

# ChatGPT plugin demo

## start & activate

The screenshot shows the Visual Studio Code interface with the following details:

- File Explorer:** Shows the project structure with files: main.py, openapi.yaml, .well-known/ai-plugin.json, .gitignore, LICENSE, logo.png, and requirements.txt.
- Code Editor:** The main.py file is open, displaying Python code for a Quart plugin. The code includes imports for quart, quart\_cors, and quart.request, and defines endpoints for members, activities, protocols, logo, and openapi spec.
- Terminal:** The terminal tab is active, showing options for powershell and Python Debug Console.
- Status Bar:** Shows the current line (Ln 96), column (Col 1), spaces (Spaces: 4), encoding (UTF-8), line feed (LF), Python version (3.9.16 [python39:conda]), and other status information.

## ask for protocols & summarize

# ChatGPT plugin demo

ask for protocols & summarize

The screenshot shows the ChatGPT interface with a generated image and its description.

**Image Description:** A 10-year-old boy is happily counting sheep while lying in bed. The sheep are funny scientists jumping over a fence.

**Image Source:** Bing Image Creator | 1024 x 1024 jpg | Vor 4 Minuten

**Buttons:** Teilen, Speichern, Herunterladen, Feedback

**Text at the bottom:** Erstellt mit KI

**Message Input:** GPT-4 currently has a cap of 25 messages every 3 hours.

ChatGPT may produce inaccurate information about people, places, or facts. [ChatGPT May 24 Version](#)

# Table of contents

## Agenda

## Conclusion after all

- Some plugins can't be activated at the same time → Expedia/Kayak
- Max. 3 plugins can be active at the same time → Better: Just activate all
- A lot of plugins are not doing what they are offering
- **Description of the plugins is a mess**
- Best use cases when there are data sources with available REST API
- GPT-4 is really slow but much better results than GPT-3.5
- **Noteable is really cool.** Very excited about what Code-Interpreter can do! 
- Would like to create a C# plugin in the next time
